

DIFFERENT ALTERNATIVE SYSTEMS

The basic system of pre-galvanized steel profiles. Innovative cold forming technology guarantees highest precision, loading capacity and stability. Clip-type connections and screwed connections allow a quick and safe assembly.

Special design for highest block quality. Hot dip galvanized or stainless steel rack systems with integrated coverage and roller shutter doors. Suitable for vaporization, heating and exploitation of the hydration heat.

Big room system with wall and roof cladding.

System advantages - which convince!

ROTHO support profile with „Clip-in“ technology

- for a quick assembly, even by unskilled personnel
- easy exchange for maintenance purposes
- best profiled for extreme loads

Rail clip technology

- Material-protective, durable connection system
- Long lasting and efficient

Levelling system

- Individual adjusting possibilities
- Optimum levelling

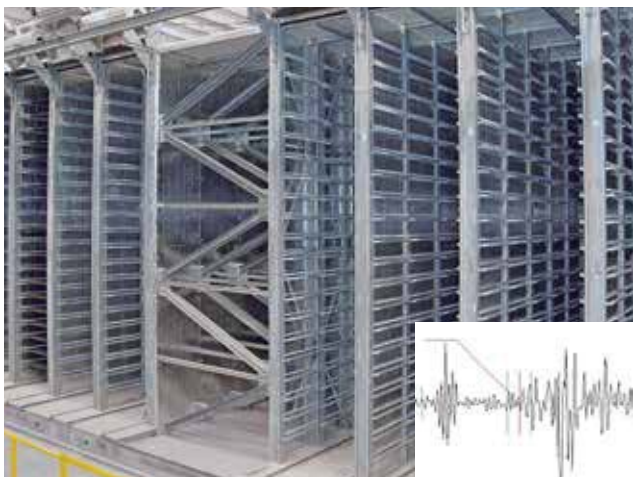

Specialities - Special solutions are part of the ROTHO standard

All variants also available with testable statics and for seismic areas

Roller shutter door system

- Well-aimed sealing technology for application in the concrete block industry
- Solid execution
- Special motive power engineering for utmost process security

Special solutions for seismic areas.

Pallet buffer and mould store.
